Hello Eligio,

I have some exciting news to share with you - today we announced a strategic partnership to create and launch a new end-to-end public safety solution, "PlateRanger™, powered by Rekor®."

Our customers have expressed interest in an LPR integration with ShotSpotter and SoundThinkng Products. We've accomplished this with our Rekor partnership.

This collaboration brings together two industry leaders, combining SoundThinking's expertise in acoustic gunshot detection and investigative solutions with Rekor's best-in-class vehicle and license plate recognition (LPR) technology.

When used in conjunction with ShotSpotter, PlateRanger will enable:

- streamlined investigations;
- improved operational efficiency, and
- real-time, actionable intelligence
- ... all without the need for additional resources.

And if you don't have gunshot detection, the system delivers significant investigative value on automotive-related crime.

Key capabilities of PlateRanger include:

- **Real-time insights** - capture crucial moments around criminal events to improve response times and provide significant investigative value.
- **Detailed vehicle data** - make, model, color, direction of travel and more.
- **Seamless integrations** - with solutions like ShotSpotter, adding visual data to complement audio detection for streamlined investigations.

And probably most importantly, PlateRanger is backed by our world-class support - planning and deployment, testing, QA, maintenance and 24x7x365 customer service to ensure we maximize the impact of your public safety investments.

Learn more here. If you're ready to talk, book a meeting here to begin reaping the benefits of PlateRanger.
